github.com/cronzph

PROFESSIONAL SUMMARY

Full-stack developer who ships end to end: React and Firebase on the web, Java and Kotlin on Android, AI automation behind both. Runs a one-person software studio and delivers client systems with role-based access, PDF reporting and live dashboards, documented and tested on real devices before release.

EXPERIENCE

Freelance Full-Stack Developer

2026 – Present

CronzPH (One Person Corporation) · Bulacan, Philippines

- Built and deployed client web applications on React, Vite, Firebase and Vercel, owning the interface, the data model and the release for each project.
- Delivered a field-service operations system with three permission levels, digital signatures on service orders, PDF reports and real-time dashboards.
- Cut manual back-office work with scheduled reports, data sync between systems and AI-assisted sorting of incoming records.
- Wrote the handover for every build (setup steps, database rules, a walkthrough) so the client runs the system without a developer on call.

IT Intern

2026

Bulacan State University · Triple Junction, Bulacan

- Maintained university information systems with the IT staff, handling day-to-day issues and keeping service interruptions short.
- Worked on system analysis, coding and database management, tracing faults to their cause instead of patching the symptom.

SELECTED PROJECTS

CPH-MaxHub

Android · Java · SQLite · NanoHTTPD

Turns an Android phone into an OpenAI-compatible AI endpoint. github.com/cronzph/CPHMaxHub

- Serves the OpenAI chat API from the phone to desktop clients, scripts and chat UIs over LAN or Tailscale, one proxy instance per provider and port.
- Enforces per-instance token caps in SQLite, keeps provider keys encrypted on the device and converts OpenAI image requests to Bedrock's vision format.

Notes AI

JavaScript · Groq · Firebase · Vercel

Notes app that files itself. github.com/cronzph/AI-NOTES

- Groq (Llama 3.3 70B) reads each note and assigns its own category, so nothing is tagged by hand; unseen categories get a generated colour.
- Firebase Auth and Realtime Database sync every account across devices; ships as an installable PWA behind a serverless proxy that keeps the model key off the client.

School Facility Management System

Mobile · Firebase

Capstone build for campus operations.

- Mobile reporting and maintenance tracking with live updates, replacing paper requests and keeping a record of every repair from report to close.

TECHNICAL SKILLS

Frontend	React, Vite, JavaScript (ES6+), HTML5, CSS3, Tailwind, responsive and mobile-first layout
Backend & data	Node.js, PHP, Firebase (Auth, Firestore, Realtime Database, Storage), MySQL, SQL Server, REST APIs, security rules
Mobile	Java, Kotlin, Android SDK, Gradle, SQLite
AI & automation	Claude API, Gemini, OpenRouter, AWS Bedrock, Ollama, LiteLLM, n8n, prompt engineering, retrieval pipelines
Tools & ops	Git, GitHub, Vercel, Linux (Debian, Ubuntu), Termux, Tailscale, VS Code, LAN/WAN networking, IP addressing

EDUCATION

Bachelor of Science in Information Technology — Bulacan State University 2022 – 2026

Certificates: HTML and Python — Mimo, 2026
